Portfolio

Experience

Computepool Solutions **Hyderabad**
Full Stack Intern *Feb 2026 - present*

- Built a food catering website using HTML, CSS, and JavaScript to create a smooth, mobile-friendly experience for customers.
- Developed the **backend system** with Node.js to manage menu updates, process customer orders, and handle all user requests.

Projects

FanOutService | *Social Network celebrity on-write* *Link*

***Tech Stack**: C++, CMake, gRPC, Protocol Buffers, Redis, Docker*

- Built a **high-speed delivery system** in C++ that pushes real-time updates to thousands of users with sub-100ms response times.
- Reduced data latency by using a **REDIS in-memory cache** and asynchronous I/O to handle massive traffic spikes efficiently.
- Optimized system performance using **smart memory management** and background workers to process complex tasks without slowing down the user experience.

NodeLink | *P2P File Transfer* *Link*

***Tech Stack**: C++, CMake, Bencoding, BitTorrent, TCP and UDP sockets*

- A **peer-to-peer** (P2P) file downloader capable of downloading parallel pieces from multiple peers.
- Implemented custom **Bencoding parsers** to decode .torrent metadata and managed network communication via TCP/IP sockets.
- Ensured 100% **data accuracy** by using digital signatures to verify every file piece and a **smart selection algorithm** to find rare data first.
- Created a **multitasking engine** that handles over 50 simultaneous connections at once without slowing down the application.

Paymentee App | *Expense tracking Application* *Link*

***Tech Stack**: TypeScript, Next.js, React, TailwindCSS, PostgresSQL, Docker*

- Built a group expense-sharing app using Next.js and TypeScript that lets users easily split bills, track spending, and manage debts in real-time.
- Created a smart **"settle up"** algorithm that automatically simplifies complex debts between multiple people into the fewest possible payments.
- Designed a **secure database system** to accurately handle thousands of group transactions and ensure everyone's balance is always correct.
- Improved app **speed and security** by using modern coding practices to protect user data and make the dashboard load instantly.

Skills Summary

Languages: C++, C, JavaScript, TypeScript

Frameworks: React, Redux, Next.js, Node.js, Express

Tools: MongoDB, SQL, PostgresSQL, CMake, Docker, Redis, Git, AWS

Publications and Achievements

Paper on Hybrid Cloud Task Allocation accepted at ESPTA'24, IEEE MASS Conference, Seoul. Link

Leetcode **Knight** with contest rated 1800+ Link

Education

SRMAP University
B.Tech (CSE), GPA: 8.39/10.0 *2021–2025*

Narayana Junior College
Class 12th (BIEAP), 94.2% *2019–2021*
